DOSE SETTING VD Max STUDY TO ISO 11137-PART 2:2006

"STERILIZATION OF HEALTHCARE PRODUCTS RADIATION ESTABLISHING THE STERILIZATION PART 2:2006"

KIMTECH PURE * G3/G5 STERILE STERLING NITRILE GLOVES

REPORT NO. 0907371

JUNE - JULY 2009

Report Prepared By: ..... 21/07/09 Microbiologist

Report Reviewed By: ..... 21/07/09 QA Manager

SUMMARY

This study was undertaken in accordance with Method VD max [25] of "Sterilization of healthcare products – Radiation Part 2 – Establishing the sterilization dose 11137-2:2006. The study was to substantiate a Sterilization dose of 25kGy.
3 batches of Kimtech Pure * G3/G5 Sterling Sterile Nitrile Gloves were assayed for bioburden levels. The overall average for the batch tested was13.43 /unit sample .No single batch was shown to be more than twice this overall average and therefore this overall average was used to calculate the sub process verification dose .

With reference to Table 9 of the ISO 11137 – 2:2006 document, the nearest value listed equal to or greater than the bioburden level is 14 CFU. Therefore the sub- process dose required for the sterility assurance level of 10^{-1} is 7.5kGy +/- 10% (6.8 kGy – 8.2 kGy).

Therefore 10 units were irradiated at this dose and subsequently individually tested for sterility. After the full incubation period all tests gave a negative result, therefore statistical verification for the sub process dose is accepted.

In conclusion ,a dose of 25kGy will provide a sterility assurance level of 10^{-6} .

Test Method for Analyzing Liquid Particle Counts

This test method is used to analyze the mobile particle contaminants from cleanroom gloves.

1. Scope
   - 1.1. The test method covers the average particulate contamination found on gloves designated for cleanroom applicability.
   - 1.2. The average contaminant concentration will be reported in particles per cm^2 in two ways:
     - 1.2.1. By size grouping, 0.5 to 1.0 microns, 1.0 to 2.0 microns, 2.0 to 5.0 microns, 5.0 to 10.0 microns, 10.0 to 20.0 microns, greater than 20.0 microns, and a total particle count greater than 0.5 microns.
     - 1.2.2. Statistical analysis of each grouping consisting of Minimum Value, Maximum Value, Standard Deviation, and Average Value, for each group of individual gloves.
   - 1.3. The safe and proper use of gloves is beyond the scope of this test method.
   - 1.4. This test method does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this Test Method to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.

2. Referenced Documents

NOTICE: THIS INSERT SHOULD BE FURNISHED OR MADE AVAILABLE TO THE USERS OF THESE GLOVES AS A SAFETY PRECAUTION.
This is a Category III PPE product certified according to Regulation (EU) 2016/425 and to the Regulation (EU) 2016/425 as brought in the UK law and amended. Risk: Gloves offer protection against chemicals (Splash) and micro-organisms.
This information does not reflect the actual duration of protection in the workplace and the differentiation between mixtures and pure chemicals. The chemical resistance has been assessed under laboratory conditions from samples taken from the palm only and relates only to the chemical tested. It can be different if the chemical is used in a mixture. Degradation results indicate the change in puncture resistance after exposure to the challenge chemical. It is recommended to check that the gloves are suitable for the intended use because the conditions at the workplace may differ from the type test depending on temperature, abrasion and degradation. When used, protective gloves may provide less resistance to the dangerous chemical due to changes in the physical properties. Movements, snagging, rubbing, degradation caused by the chemical contact etc. may reduce the actual use time significantly. For corrosive chemicals, degradation can be the most important factor to consider in selection of chemical resistant gloves. The penetration resistance has been assessed under laboratory conditions and relates only to the tested specimen. Before usage, inspect the gloves for any defect or imperfections. Discard any gloves presenting a defect Refer to enclosed donning and doffing instructions. For single use only. Store in a cool dry place. Dispose of according to local regulations. A list of substances known to cause allergies can be supplied on demand.

AVIS : PAR MESURE DE SÉCURITÉ, CET ENCART DOIT ÊTRE FOURNI AUX UTILISATEURS DE CES GANTS OU ÊTRE À LEUR DISPOSITION.
Il s’agit d’un EPI de catégorie III certifié conforme au Règlement (UE) 2016/425 EEC. Risque : Les gants offrent une protection contre les produits chimiques (éclaboussures) et les micro-organismes.
Ces informations ne reflètent pas nécessairement la durée réelle de protection en milieu de travail ni la différence entre les mélanges et les produits chimiques purs. La résistance aux produits chimiques a été évaluée en laboratoire avec des échantillons prélevés dans la paume seulement et ne concerne que le produit chimique testé. Les résultats peuvent être différents si le produit chimique est utilisé dans un mélange. Les résultats relatifs à la dégradation indiquent le changement dans la résistance à la perforation après l'exposition au produit chimique. Il est recommandé de s'assurer que les gants conviennent à l'usage prévu en conditions réelles car celles-ci peuvent différer de celles du test standard en fonction de la température, de l'abrasion et de la dégradation. Lorsqu'ils sont utilisés, les gants peuvent fournir moins de résistance aux produits chimiques dangereux en raison de changements dans les propriétés physiques. Les mouvements, déchirures, frottements et dégradations engendrés lors du contact avec les produits chimiques, etc. peuvent réduire la durée réelle d'utilisation de façon significative. Dans le cas des produits chimiques corrosifs, la dégradation peut être le facteur le plus important à considérer lors du choix de gants résistants aux produits chimiques. La résistance à la pénétration a été évaluée en laboratoire et ne concerne que l'échantillon testé. Inspecter les gants avant l'utilisation pour vérifier qu'ils ne comportent pas de défauts ou d'imperfections. Jeter les gants présentant un défaut Consulter les instructions ci-jointes pour enfiler et retirer les gants. Usage unique seulement. Ranger dans un endroit frais et sec. Mettre au rebut conformément aux règlements municipaux. Une liste des substances connues pour provoquer des allergies peut être fournie sur demande.

HINWEIS: DIESE PACKUNGSBEILAGE SOLLTE ANWENDERN ALS SICHERHEITSVORKEHRUNG AUSGEHÄNDIGT ODER ZUR VERFÜGUNG GESTELLT WERDEN.
Dies ist ein nach Kategorie III PSA zertifiziertes Produkt gemäß Verordnung (EU) 2016/425 EWG. Risiko: Handschuhe bieten Schutz gegen Chemikalien (Spritzer) und Mikroorganismen.
Diese Informationen spiegeln nicht die tatsächliche Schutzdauer am Arbeitsplatz und die Differenzierung zwischen Mischungen und reinen Chemikalien wider. Die Chemikalienbeständigkeit wurde unter Laborbedingungen durch ausschließlich an der Handfläche entnommene Proben bestimmt und bezieht sich nur auf die geprüfte Chemikalie. Die Beständigkeit kann unterschiedlich sein, wenn die Chemikalie in einer Mischung verwendet wird. Degradationsergebnisse zeigen die Punktionsbeständigkeit nach Exposition gegenüber der Chemikalie an. Es wird empfohlen, die Eignung der Handschuhe für den vorgesehenen Verwendungszweck zu prüfen, da sich die Bedingungen am Arbeitsplatz von den Prüfbedingungen hinsichtlich Temperatur, Abnutzung und Zersetzung unterscheiden können. Schutzhandschuhe können bei der Verwendung aufgrund von Veränderungen der physikalischen Eigenschaften eine geringere Beständigkeit gegen die gefährliche Chemikalie aufweisen. Bewegungen, Verhakung, Reibung, durch den Kontakt mit Chemikalien verursachte Zersetzung usw. können die tatsächliche Verwendungszeit erheblich verringern. Bei korrosiven Chemikalien kann Zersetzung der wichtigste Faktor sein, der bei der Auswahl von chemikalienbeständigen Handschuhen zu berücksichtigen ist. Der Penetrationswiderstand wurde unter Laborbedingungen geprüft und bezieht sich nur auf die geprüfte Probe. Die Handschuhe vor der Verwendung auf Mängel oder Fehler prüfen. Handschuhe mit Mängeln sind zu entsorgen Siehe beigefügte Anweisungen zum Anziehen und Ausziehen. Nicht zur Wiederverwendung. An einem kühlen, trockenen Ort lagern. Gemäß den lokalen Bedingungen entsorgen. Eine Liste der Stoffe, die bekanntermaßen Allergien auslösen, kann auf Anfrage geliefert werden.

WAARSCHUWING: DEZE BIJSLUITER DIENT ALS VEILIGHEIDSMAATREGEL GEGEVEN TE WORDEN AAN OF TER BESCHIKKING GESTELD TE WORDEN VAN DE GEBRUIKERS VAN DEZE HANDSCHOENEN.
Dit is een persoonlijk beschermingsmiddel van categorie III volgens Verordening (EU) 2016/425/EEG. Risico: Handschoenen bieden bescherming tegen chemische stoffen (spatten) en micro-organismen.
Deze informatie is geen weerspiegeling van de werkelijke beschermingsduur in de werkomgeving en de differentiatie tussen mengsels en zuivere chemicaliën. De chemische weerstand is onder laboratoriumomstandigheden beoordeeld op grond van monsters genomen van alleen de palm en heeft alleen betrekking op het geteste chemische product. Het kan anders zijn als het chemische product in een mengsel wordt gebruikt. Verslechteringsresultaten geven de verandering in punctiebestendigheid na blootstelling aan de betreffende chemische stof aan. Het wordt aanbevolen te controleren of de handschoenen geschikt zijn voor het beoogde gebruik omdat de omstandigheden in de werkomgeving kunnen verschillen van de typetest afhankelijk van temperatuur, schuring en afbraak. Bij het gebruik kunnen beschermende handschoenen minder weerstand bieden tegen het gevaarlijke chemische product vanwege veranderingen in de fysische eigenschappen. Bewegingen, blijven haken, wrijven, afbraak veroorzaakt door contact met het chemische product etc. kunnen de werkelijke gebruiksduur aanzienlijk verminderen. Bij corrosieve chemische producten kan afbraak de belangrijkste factor zijn waarmee rekening moet worden gehouden bij de keuze van chemisch bestendige handschoenen. De weerstand tegen indringen is beoordeeld onder laboratoriumomstandigheden en heeft alleen betrekking op het geteste specimen. Controleer de handschoenen vóór gebruik op beschadiging of onvolkomenheden. Gooi handschoenen met een beschadiging weg Raadpleeg de bijgevoegde instructies voor aan- en uittrekken. Uitsluitend voor eenmalig gebruik. Op een koele, droge plaats bewaren. Afvoeren volgens de plaatselijke voorschriften. Een lijst van stoffen waarvan bekend is dat ze allergieën veroorzaken, is op aanvraag verkrijgbaar.

AVVISO - QUESTO INSERTO DEVE ESSERE FORNITO O RESO DISPONIBILE COME MISURA DI SICUREZZA A COLORO CHE UTILIZZANO QUESTI GUANTI.
Questo prodotto è certificato come DPI di categoria III secondo il Regolamento (UE) 2016/425 CEE. Rischio: i guanti offrono protezione contro sostanze chimiche (schizzi) e microrganismi.
Queste informazioni non riflettono la durata effettiva della protezione sul luogo di lavoro e la distinzione tra prodotti chimici miscelati e puri. La resistenza chimica è stata misurata in condizioni di laboratorio su campioni presi solo dal palmo della mano e si riferisce solo al prodotto chimico testato. Può essere diverso se il prodotto chimico viene utilizzato in una miscela. I risultati della degradazione indicano il cambiamento nella resistenza alle perforazioni dopo l'esposizione a sostanze chimiche. Si consiglia di controllare che i guanti siano idonei per l'uso previsto poiché le condizioni del luogo di lavoro possono differire dal tipo di test a seconda della temperatura, abrasione e degradazione. Quando utilizzati, i guanti di protezione possono fornire meno resistenza ai prodotti chimici pericolosi a causa di cambiamenti delle proprietà fisiche. Il tempo effettivo di utilizzo può essere ridotto significativamente a causa di movimenti, sfilacciamento, strofinamento o degradazione dovuti al contatto con prodotti chimici, ecc. In caso di contatto con prodotti chimici corrosivi, il fattore più determinante da considerare nella scelta di guanti resistenti ai prodotti chimici è la resistenza alla degradazione. La resistenza alla penetrazione è stata misurata in condizioni di laboratorio e riguarda solo il campione testato. Prima dell'uso, ispezionare i guanti per verificare l'assenza di difetti o imperfezioni. Smaltire adeguatamente qualsiasi guanto che presenti difetti Consultare le istruzioni allegate per indossare e togliere il prodotto. Solo monouso. Conservare in un luogo asciutto e fresco. Smaltire in conformità alle disposizioni locali. Un elenco di sostanze note come causa di allergie può essere fornito su richiesta.

σχισίματα, τριβή, αποδόμηση που προκλήθηκε από επαφή με τη χημική ουσία κ.λπ. ενδέχεται να μειώσουν σημαντικά τον πραγματικό χρόνο χρήσης. Όσον αφορά στις διαβρωτικές χημικές ουσίες, η αποδόμηση είναι ο πιο σημαντικός παράγοντας που πρέπει να λάβει κανείς υπόψη του κατά την επιλογή γαντιών ανθεκτικών στις χημικές ουσίες. Η αντίσταση διείσδυσης έχει υπολογιστεί σε εργαστηριακές συνθήκες και σχετίζεται μόνο με το ελεγχόμενο είδος. Πριν από τη χρήση ελέγξτε τα γάντια για ελαττώματα ή ατέλειες. Απορρίψτε τυχόν γάντια που παρουσιάζουν ελάττωμα Ανατρέξτε στις συνημμένες οδηγίες φορέματος και αλλάγματος. Αποκλειστικά μίας χρήσης. Φυλάσσεται σε δροσερό και ξηρό χώρο. Bu ürün (AB) 2016/425 AET sayılı Yönetmelik'e göre sertifikalandırılmış Kategori III KKD (Kişisel Koruyucu Donanım) ürünüdür. Risk: Eldivenler kimyasallara (Sıçrama) ve mikroorganizmalara karşı koruma sağlar.
Bu bilgi, çalışma yerlerindeki gerçek koruma süresini ve kanşımlar ile saf kimyasallar arasındaki farklılığı yansıtmamaktadır. Kimyasal direnç, laboratuvar koşulları altında yalnızca avuç içinden alınan numuneler ile ölçülmüştür ve sadece test edilen kimyasala ilişkindir. Kimyasal bir karışımda kullanılıyorsa, farklı olabilir. Bozunum sonuçları, kimyasal maruziyeti sonrasında delinme direncini göstermektedir. Eldivenlerin istenen kullanım için uygun olup olmadığını kontrol etmeniz önerilir, çünkü çalışma yerindeki koşullar sıcaklık, aşınma ve bozunmaya bağlı olarak tip testinden farklı olabilir. Koruyucu eldivenler kullanıldığında, fiziksel özelliklerde meydana gelen değişiklikler nedeniyle tehlikeli kimyasallara karşı daha az direnç gösterebilir. Hareketler, delinmeler, sürtünme, kimyasal temastan kaynaklanan bozunmalar gerçek kullanım süresini büyük ölçüde azaltabilir. Aşındırıcı kimyasallar için kimyasallara dirençli eldiven seçiminde bozunma en önemli faktördür. Nüfuz etmeye karşı direnç laboratuvar koşulları altında ölçülmüştür ve yalnızca test edilen numuneye ilişkindir. Kullanmadan önce eldivenlerde herhangi bir kusur veya eksiklik olup olmadığını kontrol edin. Kusurlu eldivenleri atın Ekli takma ve çıkarma talimatlarına bakın. Tek kullanım içindir. Serin ve kuru ortamda saklayın Yerel düzenlemelere göre bertaraf edin Alerjiye neden olduğu bilinen maddelerin listesi talep üzerine temin edilebilir.

この情報は、実際の作業場での保護期間、および、化学物質が混合物か純粋なものかを保障するものではありません。 耐薬品性とは、手のひらのみから採取したサンプルを、実験室条件下で特定の化学品のみに対して試験し、得られた結果を指します。これは、化学物質が混合物の一部として使用される場合、異なることもあります。 劣化の結果は、試験化学物質への暴露後の手袋の対破壊性における変化を示します。 実際の作業場の状態は、温度、磨耗および劣化など、タイプテストと異なる場合があるため、手袋が意図した用途に適していることを確認することが推奨されています。 保護手袋は、使用中に起こる物理的特性の変化により、危険な化学物質に対する抵抗力が低下することがあります。 動作、かぎ裂き、摩擦、化学物質との接触による劣化により、実際の耐用期間が大きく短縮される可能性があります。 腐食性化学物質の場合、劣化は耐薬品性手袋の選択において最も重要な要素となります。 耐貫通性とは、実験室条件
